

# flipitnews-word-embedding-word2vec

April 20, 2024

NLP: FlipItNews By Ratnesh Kumar

Context:

The Gurugram-based company 'FlipItNews' aims to revolutionize the way Indians perceive finance, business, and capital market investment, by giving it a boost through artificial intelligence (AI) and machine learning (ML). They're on a mission to reinvent financial literacy for Indians, where financial awareness is driven by smart information discovery and engagement with peers. Through their smart content discovery and contextual engagement, the company is simplifying business, finance, and investment for millennials and first-time investors

## Problem Statement:

The goal of this project is to use a bunch of news articles extracted from the companies' internal database and categorize them into several categories like politics, technology, sports, business and entertainment based on their content. Use natural language processing and create & compare at least three different models.

Attribute Information:

Article

Category

The features names are themselves pretty self-explanatory

Concepts Tested:

Natural Language Processing

Text Processing

Stopwords, Tokenization, Lemmatization

Bag of Words, TF-IDF

Multi-class Classification

Evaluation Criteria (100 points)

1. Importing the libraries & Reading the data file (10 points)
2. Exploring the dataset (10 points)

Shape of the dataset

News articles per category

### 3. Processing the Textual Data i.e. the news articles (30 points)

Removing the non-letters

Tokenizing the text

Removing stopwords

Lemmatization

### 4. Encoding and Transforming the data (20 points)

Encoding the target variable

Bag of Words

TF-IDF

Train-Test Split

### 5. Model Training & Evaluation (30 points)

Simple Approach

Naive Bayes

Functionalized Code (Optional)

Decision Tree

Nearest Neighbors

Random Forest

#Evaluation Criteria (100 points)

### 1. Importing the libraries & Reading the data file (10 points)

```
[2]: import pandas as pd
df=pd.read_csv('/content/sample_data/flipitnews-data.csv')
#df=df.head(30)
df.head()
```

```
[2]:
```

	Category	Article
0	Technology	tv future in the hands of viewers with home th...
1	Business	worldcom boss left books alone former worldc...
2	Sports	tigers wary of farrell gamble leicester say ...
3	Sports	yeading face newcastle in fa cup premiership s...
4	Entertainment	ocean s twelve raids box office ocean s twelve...

### 2. Exploring the dataset (10 points)

- \* Shape of the dataset
- \* News articles per category

```
[2]: print('Shape of Dataset - ',df.shape)
```

```
print('Total No. of News Articles - ',df['Category'].nunique(),':\n',df['Category'].unique())
print('News Article per category - \n',df['Category'].value_counts())
print('Shape of Dataset - ',df.shape)
#print('\nInfo - \n',df.info)
```

```
Shape of Dataset - (5, 2)
Total No. of News Articles - 4 : ['Technology' 'Business' 'Sports'
'Entertainment']
News Article per category -
Sports      2
Technology  1
Business    1
Entertainment 1
Name: Category, dtype: int64
Shape of Dataset - (5, 2)
```

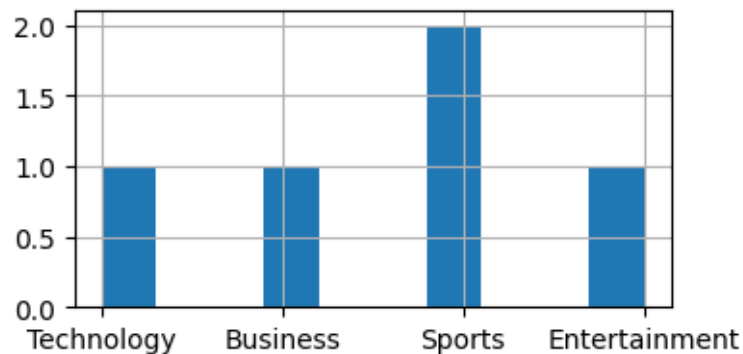

**Categorical to Numerical Encoding** Now, we will map each of these categories to a number, so that our model can understand it in a better way and we will save this in a new column named 'category\_id'. Where each of the categories are represented in numerical.

```
[59]: from sklearn.preprocessing import LabelEncoder
le=LabelEncoder()
df['Category_id']=le.fit_transform(df['Category'])
```

## Data Visualisation

```
[4]: import matplotlib.pyplot as plt
plt.figure(figsize=(4,2))
df['Category'].hist()
```

```
[4]: <Axes: >
```

## 3. Processing the Textual Data i.e. the news articles (30 points)

Removing the non-letters

Tokenizing the text

Removing stopwords

Lemmatization

```
[60]: #####Removing Stopwords_
      ↪#####
import nltk
from nltk.corpus import stopwords
nltk.download('stopwords')
#print(stopwords.words('english'))
def remove_stopwords(text):
    clean_text=' '.join([i for i in text.split() if i not in stopwords.
      ↪words('english')])
    return clean_text

df['Article']=df['Article'].apply(lambda x:remove_stopwords(x))

#####Removing Punctuations_
      ↪#####
import string

def remove_punctuation(text):
    cleantext=' '.join([i for i in text if i not in string.punctuation])
    return cleantext

df['Article']=df['Article'].apply(lambda x:remove_punctuation(x))

#####Lowering the Text_
      ↪#####
df['Article']=df['Article'].str.lower()

#####Stemming #####
from nltk.stem.porter import PorterStemmer
ps=PorterStemmer()

def stemming(text):
    clean_text=' '.join([ps.stem(i) for i in text.split()])
    return clean_text

df['Article']=df['Article'].apply(lambda x:stemming(x))

#####Lemmatization_
      ↪#####
```

```

from nltk.stem import WordNetLemmatizer
wl=WordNetLemmatizer()
nltk.download('wordnet')
def Lemmatize(text):
    clean_text=' '.join([wl.lemmatize(i) for i in text.split()])
    return clean_text

df['Article']=df['Article'].apply(lambda x:Lemmatize(x))
df['Article']

```

#Exploring Multi-classification Models(classification models)

## 5. Model Training & Evaluation (30 points)

Simple Approach - Naive Bayes

Functionalized Code (Optional)- Decision Tree,Nearest Neighbors,RandomForest

### 1. Naive Bayes - MultinomialNB

```
[63]: from sklearn.naive_bayes import MultinomialNB
      from sklearn.pipeline import Pipeline
      from sklearn.feature_extraction.text import TfidfTransformer
      from sklearn.metrics import accuracy_score
      from sklearn.metrics import classification_report

      X = df['Article']
      y = df['Category']
      # Split the data into training and testing sets
      X_train, X_test, y_train, y_test = train_test_split(X,y, test_size=0.2,
      ↪random_state=42)
```

```

print(X_train.shape, X_test.shape, y_train.shape, y_test.shape)
nb = Pipeline([('vect', CountVectorizer()),
               ('tfidf', TfidfTransformer()),
               ('clf', MultinomialNB()),
               ])
nb.fit(X_train, y_train)

# %%time
y_pred = nb.predict(X_test)

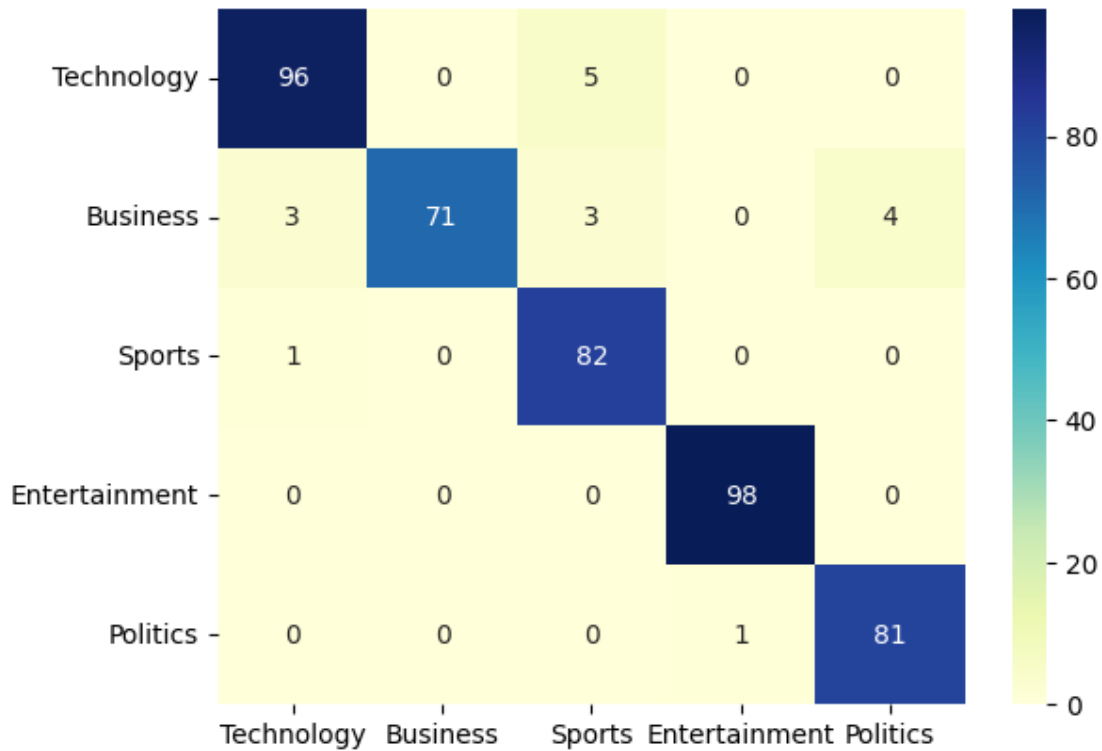

print('accuracy %s' % accuracy_score(y_pred, y_test))
print(classification_report(y_test, y_pred))
conf_matrix(y_test, y_pred)

```

(1780,) (445,) (1780,) (445,)

accuracy 0.9617977528089887

	precision	recall	f1-score	support
Business	0.96	0.95	0.96	101

macro avg	0.96	0.96	0.96	445
weighted avg	0.96	0.96	0.96	445

## 2. SGDClassifier

Linear Support Vector Machine is widely regarded as one of the best text classification algorithms.

```
[64]: from sklearn.linear_model import SGDClassifier

sgd = Pipeline([('vect', CountVectorizer()),
                 ('tfidf', TfidfTransformer()),
                 ('clf', SGDClassifier(loss='hinge', penalty='l2', alpha=1e-3,
                 random_state=42, max_iter=5, tol=None)),
                 ])
sgd.fit(X_train, y_train)

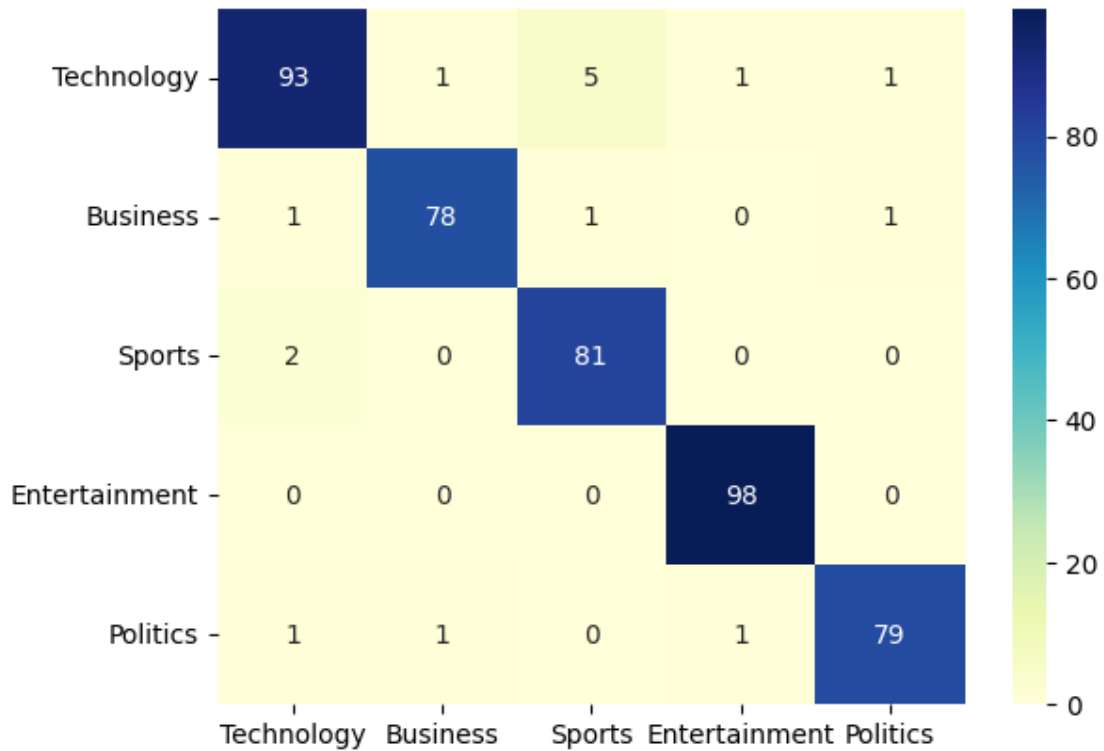

# %%time

y_pred = sgd.predict(X_test)

print('accuracy %s' % accuracy_score(y_pred, y_test))
print(classification_report(y_test, y_pred))
conf_matrix(y_test, y_pred)
```

```
accuracy 0.9640449438202248

macro avg	0.96	0.96	0.96	445
weighted avg	0.96	0.96	0.96	445

## Logistic Regression

Simple and easy to understand classification algorithm, and Logistic regression can be easily g

```
[76]: from sklearn.linear_model import LogisticRegression

logreg = Pipeline([('vect', CountVectorizer()),
                    ('tfidf', TfidfTransformer()),
                    ('clf', LogisticRegression(n_jobs=1, C=1e5, max_iter=1000)),
                    ])
logreg.fit(X_train, y_train)
```

```

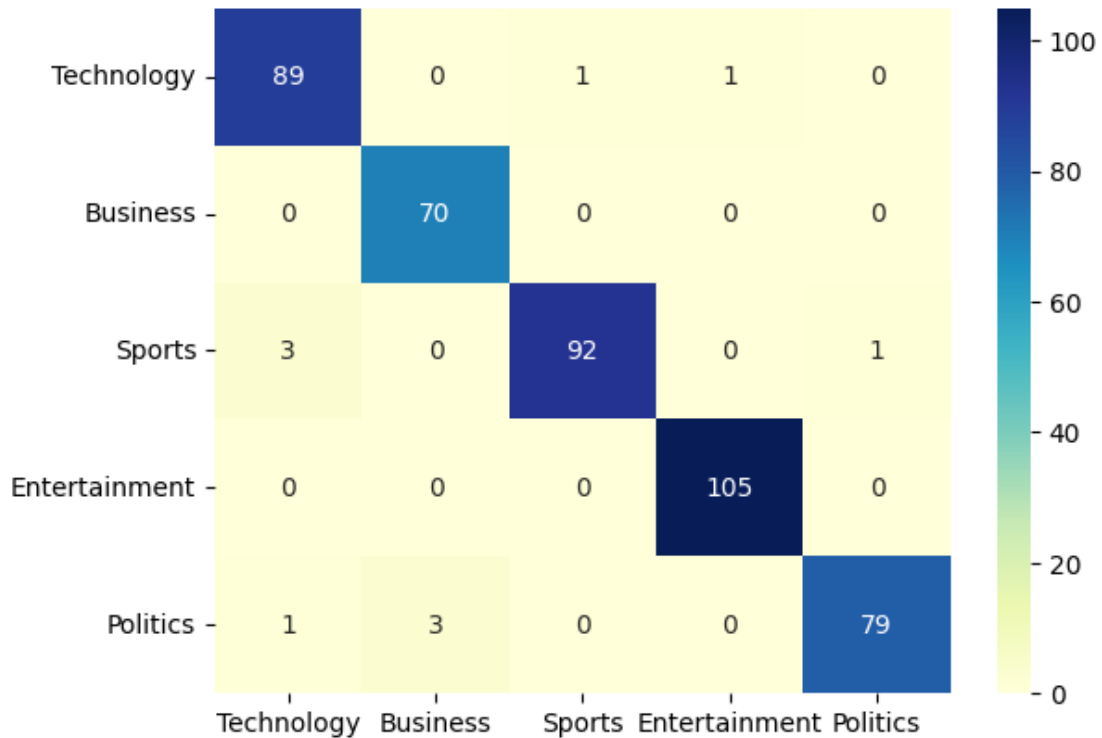

y_pred = logreg.predict(X_test)

print('accuracy %s' % accuracy_score(y_pred, y_test))
print(classification_report(y_test, y_pred))
conf_matrix(y_test, y_pred)

```

accuracy 0.9775280898876404

	precision	recall	f1-score	support

4	0.99	0.95	0.97	83
accuracy			0.98	445
macro avg	0.98	0.98	0.98	445
weighted avg	0.98	0.98	0.98	445

[118]:

```

complaint = "games maker fights for survival one of britain s largest
↳independent game makers argonaut games has been put up for sale. the
↳london-based company behind the harry potter games has sacked about 100
↳employees due to a severe cash crisis. the administrators told bbc news
↳online that selling argonaut was the only way to save it as it had run out
↳of cash. argonaut warned that it was low on cash 10 days ago when its shares
↳were suspended from trading on the london stock exchange. argonaut has been
↳making games for some 18 years and is one the largest independent games
↳developers in the uk. along with its headquarters in north london it
↳operates studios in cambridge and sheffield. argonaut was behind the harry
↳potter games which provided a healthy flow of cash into the company. but
↳like all software developers argonaut needed a constant flow of deals with
↳publishers. signs that it was in trouble emerged in august when it warned
↳it was heading for losses of £6m in the financial year due to delays in
↳signing new contracts for games. those new deals were further delayed
↳leading argonaut to warn in mid-october that it was running out of cash and
↳suspend trading of its shares on the london stock exchange. as part of
↳cost-cutting measures some 100 employees were fired. when the news about
↳the £6m loss came out we knew there were going to be redundancies said
↳jason parkinson one of the game developers sacked by argonaut. a lot of
↳people suspected that argonaut had been in trouble for some time he told
↳bbc news online. mr parkinson said staff were told the job losses were
↳necessary to save argonaut from going under. at the start of the year the
↳company employed 268 people. after the latest round of cuts there are 80
↳staff at argonaut headquarters in edgware in north london with 17 at its
↳morpheme offices in kentish town london and 22 at the just add monsters
↳base in cambridge. argonaut called in administrators david rubin & partners
↳on friday to find a way to rescue the company from collapse. it spent the
↳weekend going over the company s finances and concluded that the only way to
↳save the business was to put it up for sale. the administrator told bbc news
↳online that the costs of restructuing would be too high partly because of
↳the overheads from the company s four premises across the uk. it said it was
↳hopeful that it could save some 110 jobs by selling the business saying it
↳had had expressions of interest from several quarters and were looking for a
↳quick sale. the administrator said it would ensure that staff made redundant
↳would receive any wages redundancy or holiday pay due to them hopefully by
↳christmas."

print(logreg.predict([complaint]))

#Using the same data set, we are going to try some advanced techniques such as word embedding and neural networks. Now, let's try some complex features than just simply counting words.

## Decision Tree

Most powerful tools of supervised learning algorithms used for both classification and regression. DecisionTreeClassifier is capable of both binary (where the labels are [-1, 1]) classification

```
[68]: from sklearn.tree import DecisionTreeClassifier, plot_tree
      from sklearn.metrics import accuracy_score
      from sklearn.metrics import classification_report

      from sklearn.feature_extraction.text import CountVectorizer
      cv=CountVectorizer()
